Re: The Benefits of Using WEBBERTEK's Paint Removal Product.

To Whom It May Concern:

When Capital Aviation decided to switch from using paint removal products that were manufactured using Methylene Chloride and Phenols to using the non hazardous paint removal product from WEBBERTEK LLC, Capital Aviation has been able to go from being a Large Quantity Generator to a Conditionally Exempt Small Quantity Generator for their Paint Shop department as defined by the federal EPA and local DEQ agencies. This has allowed Capital Aviation to no longer be required to file any Tier II reports, Form R reports (Toxic Release Inventory) and a plethora of associating documentation . This product also allows the non filing of a DOT F 5800.2 Hazardous Material Shipping form as it is listed as a 'Non-Hazardous' material for any shipping requirements. Now, Capital Aviation no longer has to do business with companies that specialize in the removal of toxic hazardous waste, such as "Clean Harbors" from Plaquemine, Louisiana or "Disposal Systems Inc." from Deer Park, Texas since Capital Aviation no longer generates any toxic hazardous material/s that require disposal. Capital Aviation was generating over 3500 gallons per month of hazardous waste before switching to WEBBERTEK's paint stripper. Now the quantity of toxic hazardous waste generated is zero (0). All because of switching to using WEBBERTEK's paint removal product.
